

Empathy Map

An Empathy Map is a visual tool used to understand the needs, thoughts, feelings, and actions of the end user. It helps in designing a system that provides a better user experience.

Empathy Map Diagram

User Persona

Primary User: Government Officer / Electricity Board Analyst / Data Analyst

Responsibilities

- Monitor electricity consumption.
- Compare consumption across states and regions.
- Generate reports.
- Support decision-making.

User Needs

- Easy access to electricity data.
- Interactive visualizations.
- Fast filtering and comparison.
- Accurate information.
- User-friendly interface.

User Pain Points

- Manual analysis takes a lot of time.
- Large datasets are difficult to understand.
- Static reports are less informative.
- Comparing multiple regions is difficult.
- Decision-making becomes slower.

Proposed Solution

The proposed system addresses these problems by:

- Storing data efficiently in Oracle Database.
 - Processing data using SQL queries.
 - Creating interactive Tableau Dashboards and Stories.
 - Publishing dashboards on Tableau Public.
 - Providing a Flask-based web application for easy access.
-

Benefits to Users

- Easy-to-use dashboard.
- Faster data analysis.
- Better visualization.
- Improved decision-making.
- Public accessibility through the Flask website.

Conclusion

The Empathy Map identifies the user's expectations and challenges while analyzing electricity consumption data. Understanding these requirements helped in designing a simple, interactive, and efficient solution using Oracle Database, SQL, Tableau, and Flask.
