

Customer Journey Map

Project: Electricity Consumption Analysis Dashboard

Stage	User Activity	User Goal	User Experience	Challenges	Solution
1. Data Collection	Collect electricity consumption data from different states	Gather accurate data	Easy	Data may be scattered	Store data in a single CSV/Excel file
2. Data Preparation	Clean and organize the dataset	Prepare data for analysis	Good	Missing or duplicate values	Perform data cleaning before visualization
3. Dashboard Analysis	Open Tableau Dashboard	Analyse electricity consumption	Interactive	Large amount of information	Use filters and charts for better understanding
4. Compare status	Compare consumption between states	Identify high and low consumption	Informative	Manual comparison is difficult	Use Bar Chart and Map visualization
5. Trend Analysis	Observe monthly trends	Understand seasonal changes	Helpful	Trend identification takes time	Use Line Chart and Area Chart
6. Decision Making	Generate reports	Support planning and resource allocation	Satisfied	Needs accurate insights	Interactive Dashboard provides clear reports

Customer Journey Summary

The customer journey describes how users interact with the Electricity Consumption Analysis Dashboard. The process begins with collecting electricity consumption data, followed by cleaning and organizing the dataset. Users then explore interactive Tableau dashboards to compare state-wise, region-wise, and sector-wise electricity consumption using charts, maps, and filters. Monthly trends are analysed to understand consumption patterns, enabling users to make informed decisions and generate reports efficiently.

Simple Flow:
